The following is an examiner's statement of reasons for allowance:

The English abstract of JP 404094799A fails to state whether the hydrogen-oxidizing bacteria (HOB) derive their carbon from organic or inorganic sources. Accordingly, the examiner does not have substantial evidence that the HOB disclosed in the Japanese document are autotrophic as required by the claims. It is also unclear from the reference whether the "water contg. oxidized nitrogen" contains nitrates, nitrites, or both. What is reasonably clear, though, is that the bacteria are denitrifying for they appear to convert, i.e., reduce, whatever form of oxidized nitrogen is present. Even if the only form of oxidized nitrogen present were nitrite, the bacteria capable of reducing nitrite would still qualify as denitrifying bacteria. It is for want of the evidence that nitrate is in the raw drinking water that the limitation "nitrate-contaminated water" is not met by this art.

The previously applied art is withdrawn for at least one of the reasons given by applicant's attorney in the latest response.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
